

STIK PRESETS

PRESET INSTALLATION INSTRUCTIONS

A QUICK NOTE

BEFORE WE GET STARTED...

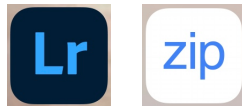

Presets make editing so much easier + way faster! They are a great starting point, but please remember that each photo will need some individual love + attention based on lighting, style, and colors in the photo. These adjustments are usually quick + small!

Some tips: after choosing your preset for the photo, start by adjusting the warmth, exposure, highlights and/or shadows!

STEP ONE:

download these two apps:

1. mobile lightroom app (free!)
2. zip extractor

STEP TWO:

open the digital download file that was sent to you in the confirmation email!

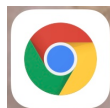

(reminder this will expire, so please download your files to your computer or icloud to save if you need it in the future!)

STEP THREE:

open using the chrome app + zip extractor app
select “open in”, then “zip extractor”

extra step: when you open the files, also select “save to icloud drive”, to make sure your presets are saved even if you lose your phone or get a new one!

(please note: the file is large, so it may take a few minutes to download!)

chrome app

STEP FOUR:

open the zip extractor app
tap on the “mikaela rae presets” folder
click “extract”

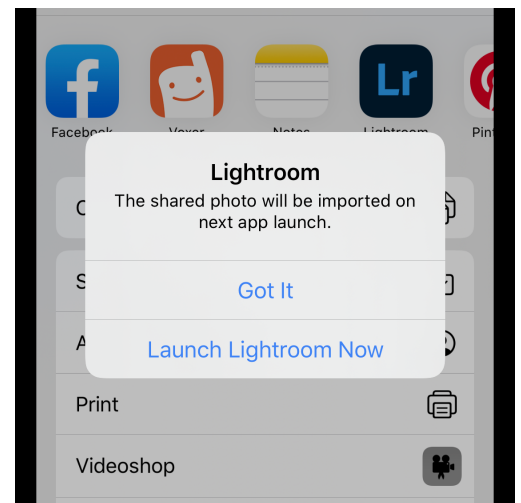

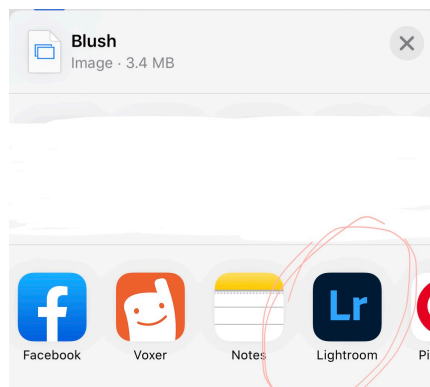

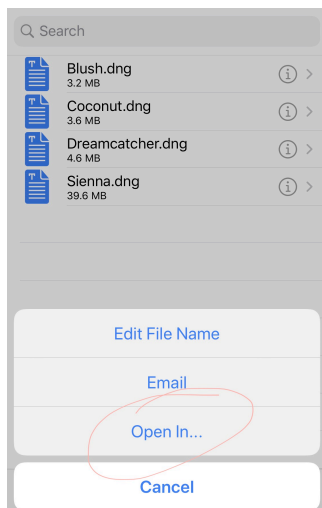

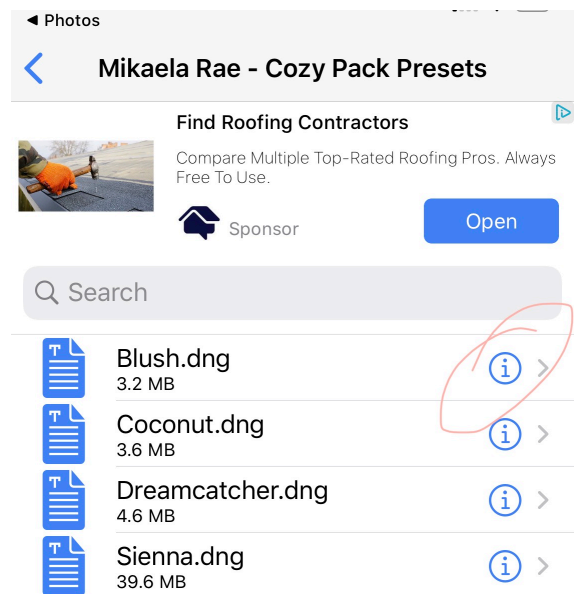

STEP FIVE:

next to each preset name you'll see
an “i” symbol

click on the “i” and tap “open in”
tap “lightroom”

repeat for each preset
(note: each preset will appear blank,
but don't worry! they won't for long)

STEP SIX:

open lightroom mobile app

you will see your new presets in the
“recently added” folder

tap the first photo

click the three dots in the upper right corner
+ select “create preset”

type in the preset name and click save (or
the check button in the upper right corner)
